

1 · Repository, CI and tests

Milestone 3 evidence, item 1: "Public GitHub repo(s) for contracts/services/frontend with CI logs, coverage report, and pilot participant letter of confirmation; README marks public vs private folders."

What is in this folder

File	What it is
test-repo rt.md · PDF	The test and coverage report: 2,732 unit/integration tests across contracts, API, packages and web app (plus a separate, non-blocking E2E job) — 2,728 passed, 3 skipped on purpose, 1 expected fail, 0 failed — plus 100% coverage on all four metrics for all four TypeScript parts, all measured in CI
aiken-cov erage-rep ort.md · PDF	The validator's own coverage evidence: every <code>expect</code> mapped to the test that aborts there (18/18), and mutation testing on every other rejection check (51/51 killed). Kept separate from <code>test-report.md</code> on purpose: Aiken has no line-coverage percentage like <code>vitest / v8</code> does for the TypeScript parts, so its evidence takes a different shape — this document explains why in its first section
ci-run-36 00450372 2.log	Full copy of the CI run the report is based on (run 36004503722 on GitHub Actions), kept here because GitHub deletes Actions logs after 90 days. Test names in it are in Spanish, the team's working language; the log is kept verbatim

Covered elsewhere

- **Public repository:** <https://github.com/Javote/real-world-real-estate>.
- **Public vs. private folders:** the repository's [README.md](#), section "This repository is public".
