

2 · API

Milestone 3 evidence, item 2: "API docs + test reports with coverage/outcomes (e.g., Postman collection)."

What is in this folder

File	What it is
openapi/propnexus.openapi.json	OpenAPI 3.1 document of the API: 94 operations, each with its method, path, required authorization (role and per-project access rule) and, where the route validates with Zod, the real request and response schemas
postman/propnexus.postman_collection.json	The same API as a Postman collection (v2.1), grouped by resource, with example bodies for the main flows (login, create project, create stage, upload evidence, accept an invitation, transition a stage)

Both files were **generated from the mounted router, not written by hand** (`pnpm --filter @plataforma/api docs:openapi` and `docs:api`), and are **frozen as of 2026-10-07** (commit `bba2237`): this folder is the Milestone 3 snapshot and is not regenerated. The API keeps evolving after the milestone, so the repository keeps a live copy of both files in [apps/api/api-docs/](#), and a test fails if that copy does not match the code.

To use the Postman collection, import it and set the `baseUrl` variable (for example `https://propnexus-api.onrender.com`) and the `token` variable (from `POST /api/v1/auth/login`).

Covered elsewhere

- **Test reports with coverage and outcomes:** the same report as item 1, [../1-repo-ci-tests/test-report.pdf](#). The web app's `ApiPort` is also tested against the live copy of this OpenAPI document.

Status

Part	Status
API docs (OpenAPI + Postman)	✓
Test reports with coverage/outcomes	✓ (item 1)
