

3 · Pre-production

Milestone 3 evidence, item 3: "*Pre-prod URL, screenshots of audit logs/latency confirming <12m median; short performance note; walkthrough video of full flow + List of transaction identifiers associated milestone test anchors.*"

Pre-production URL

- Web app: <https://propnexus-web.onrender.com>
- API: <https://propnexus-api.onrender.com>
- Network: Cardano **Preprod**

What is in this folder

File	What it is
volume-test-report.pdf	The volume test of 2026-09-10: 3 projects of 10 stages each, driven end-to-end through the real web app against pre-production — 30/30 stages completed, 180/180 on-chain transactions confirmed, the measured cost, and the one incident found and how it was fixed
transaction-ids.pdf	The formal list of the 180 transaction IDs from the volume test, each one re-verified against the chain (Koios) independently of the application's own database
txids-volume-test-2026-09-10.csv	The same 180 transactions as a data file, one row each, with a direct Cardanoscan Preprod link
reservation-to-escrow-report.pdf	The performance note: median time from reservation to escrow on chain, 0.33 min over 6 real purchases (target < 12 min), with the audit-log and explorer screenshots
reservation-to-escrow-samples-2026-09-28.csv	The 6 samples, one row each: acceptance time, block time and height, TXID, explorer link
reservation-to-escrow-telemetry-2026-09-28.json	The application's own latency telemetry for the same samples, verbatim

Status

Part	Status
Pre-production URL	✓
List of transaction IDs	✓
End-to-end flows in pre-production (volume test)	✓
Median reservation → escrow < 12 min, with audit-log/latency screenshots and a short performance note	✓ 0.33 min
Walkthrough video of the full flow	⌚ pending
