

1 · Repository, CI and tests

Milestone 3 evidence, item 1: "Public GitHub repo(s) for contracts/services/frontend with CI logs, coverage report; README marks public vs private folders."

What is in this folder

File	What it is
test-report.pdf	The test and coverage report: unit/integration tests across contracts, API, packages and web app, the E2E suite (blocking since 2026-10-07, in 4 shards), coverage per package, and the CI pipeline as it runs today
aiken-coverage-report.pdf	The validator's own coverage evidence: every <code>expect</code> mapped to the test that aborts there, and mutation testing on every other rejection check. Kept separate from <code>test-report.pdf</code> on purpose: Aiken has no line-coverage percentage like <code>vitest</code> / <code>v8</code> does for the TypeScript parts, so its evidence takes a different shape — this document explains why in its first section
ci-run-36004503722.log	Full copy of the CI run <code>test-report.pdf</code> is based on (run 36004503722 on GitHub Actions), kept here because GitHub deletes Actions logs after 90 days. Test names in it are in Spanish; the log is kept verbatim
ci-run-37569273172.log	Full copy of the first CI run with today's pipeline (run 37569273172 , 2026-10-07): one job per concern, E2E in 4 shards, every job green in 2:40. Same reason and same format as the one above

Covered elsewhere

- **Public repository:** <https://github.com/Javote/real-world-real-estate>.
- **Public vs. private folders:** the [repository's README](#), section "This repository is public".
